Benefits of Agile

- Allows developers to continually align their product with business needs through iterative planning
- Provides increased value by incrementally delivering working, tested, deployable software

Agile...What's the Point?

- Agile focuses work to provide better software more often
 - **Higher Revenue** - Faster speed to market generates more \$\$\$ quickly
 - **Better Customer Service** - Higher product quality reduces customer and business issues

What is Agile?

- **Definition:**
 - Lightweight framework for helping software development teams maintain focus on rapid delivery and business value
 - Focus is on early and continuous delivery of valuable software
 - Requirements and solutions evolve through collaboration between self-organizing cross-functional teams
- **Applications:**
 - Software development and engineering
- **Origin:**
 - Definition formed in 2001 after the development of the Agile Manifesto

Principles of Agile Software Development

1. Our highest priority is to satisfy the customer through **early and continuous delivery of valuable software**.
2. **Welcome changing requirements, even late in development.**
Agile processes harness change for the customer's competitive advantage.
3. **Deliver working software frequently**, from a couple of weeks to a couple of months, with a preference to the shorter timescale.
4. **Working software** is the primary measure of **progress**.
5. The best architectures, requirements, and designs emerge from **self-organizing teams**.

Agile Frameworks

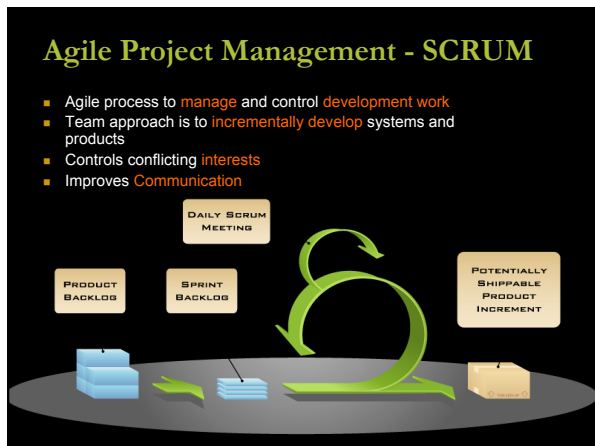

1. **Extreme Programming (XP)**
 - ❖ A widely used disciplined approach. Requires continuous testing, planning and feedback for rapid delivery
2. **Lean Software Development**
 - ❖ Focused on eliminating waste and delivering value
3. **Scrum**
 - ❖ Lightweight framework used to manage iterative projects
4. **Crystal**
 - ❖ A family of adaptive methodologies – Uses osmotic communication
5. **Dynamic Systems Development Method (DSDM)**
 - ❖ Requirements are planned and delivered based on business needs
6. **Feature Driven Development (FDD)**
 - ❖ Model-driven process of eight practices to design and build by feature

Agile and Waterfall don't speak the same language

Waterfall to Agile Translation

- ❑ Sponsor = Product Owner
- ❑ Project Schedule = Sprint Plan
- ❑ Deliverables = Features
- ❑ Project Team = Sprint Team
- ❑ % Complete is tracked by Burndown

16

Agile and Waterfall don't speak the same language

- ❑ Success is defined and tracked differently
 - Delivery of pieces vs. the whole
- ❑ Communication is different
 - Daily customer meeting vs. specified intervals
- ❑ Planning is very different
 - Many moving parts

Defining Project Success Metrics

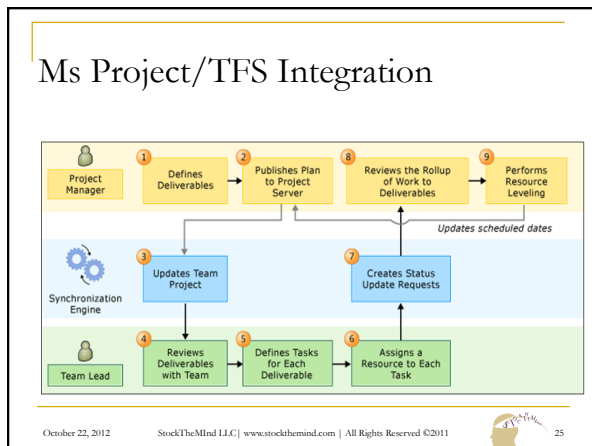

Key Questions:

- How will your report progress?
- How will we measure success?
- What is our baseline?

Typical Project Goals:

- Revenue Building
 - Speed to Market
 - New Products
 - Product enhancement
- Productivity Improvement
 - Of what group(s)

Bridge the Communication Gap

- TFS communicates with SharePoint through the Team Portal
 - ✓ View progress reports
 - ✓ Post shared documents
 - ✓ Have discussions
 - ✓ Track productivity

Let's Focus Before Moving Forward

Is Agile Right for You?

- The environment needed to become Agile:
 - High level of customer collaboration and interaction
 - Frequent delivery of working software
 - Development must accept frequent changes to features
 - Development team collaborates on what to deliver for each Sprint/Iteration
- Watch out for the pitfalls:
 - Requires minimal cultural and political issues
 - Initial decrease in productivity during transition
 - Management may be reluctant to surrender control
 - HR involvement is needed

How Can You Build Competencies?

- Get training and assistance to build team competencies and results:
 - Certified ScrumMaster
 - ✦ For Managers, Developers, Testers
 - Scrum Product Owner Training
 - ✦ For Product Managers and Functional Analysts
 - Agile Estimating and Planning
 - ✦ How to estimate and monitor progress
 - Developing Agile requirements with User Stories
 - ✦ Managing requirements and writing stories and UATs

Key Takeaways on Agile

1. A lightweight framework focused on early continuous delivery of working software
2. Has six iterative methodologies to continually deliver working product every 2-4 weeks
3. Choose the right framework for your needs.
4. Requires a high level of customer interaction and self-guided teams
5. Connect Agile to a performance or product delivery business strategy to get buy-in
