

Economics in Agile & Lean Practices

Presented by
William Baxter

May 11, 2015

Your Presenter

Blah, blah, blah...

Product Development

- Developing new products or features for customers.
- May include maintenance.
- Not operational support (customer service, build & release management, order fulfillment, etc).

Pain Points

“We need to be more efficient in order to get through this roadmap.”

–Impatient Manager, Today

“If we had more resources we could hit our deadlines.”

–Unhappy Developer, Day After the Deadline

*“I put this ticket into the backlog 2 years ago, and
it still isn’t done.”*

–Frustrated Stakeholder, At the Planning Meeting

Efficiency

Doing things with a minimum
of effort and time

Efficiency

- Ideas are cheaper to produce than to implement.
- Resources for implementation are constrained.
- Implementation capacity is always the bottleneck.
- Different ideas offer different business value.
- Time is limited.

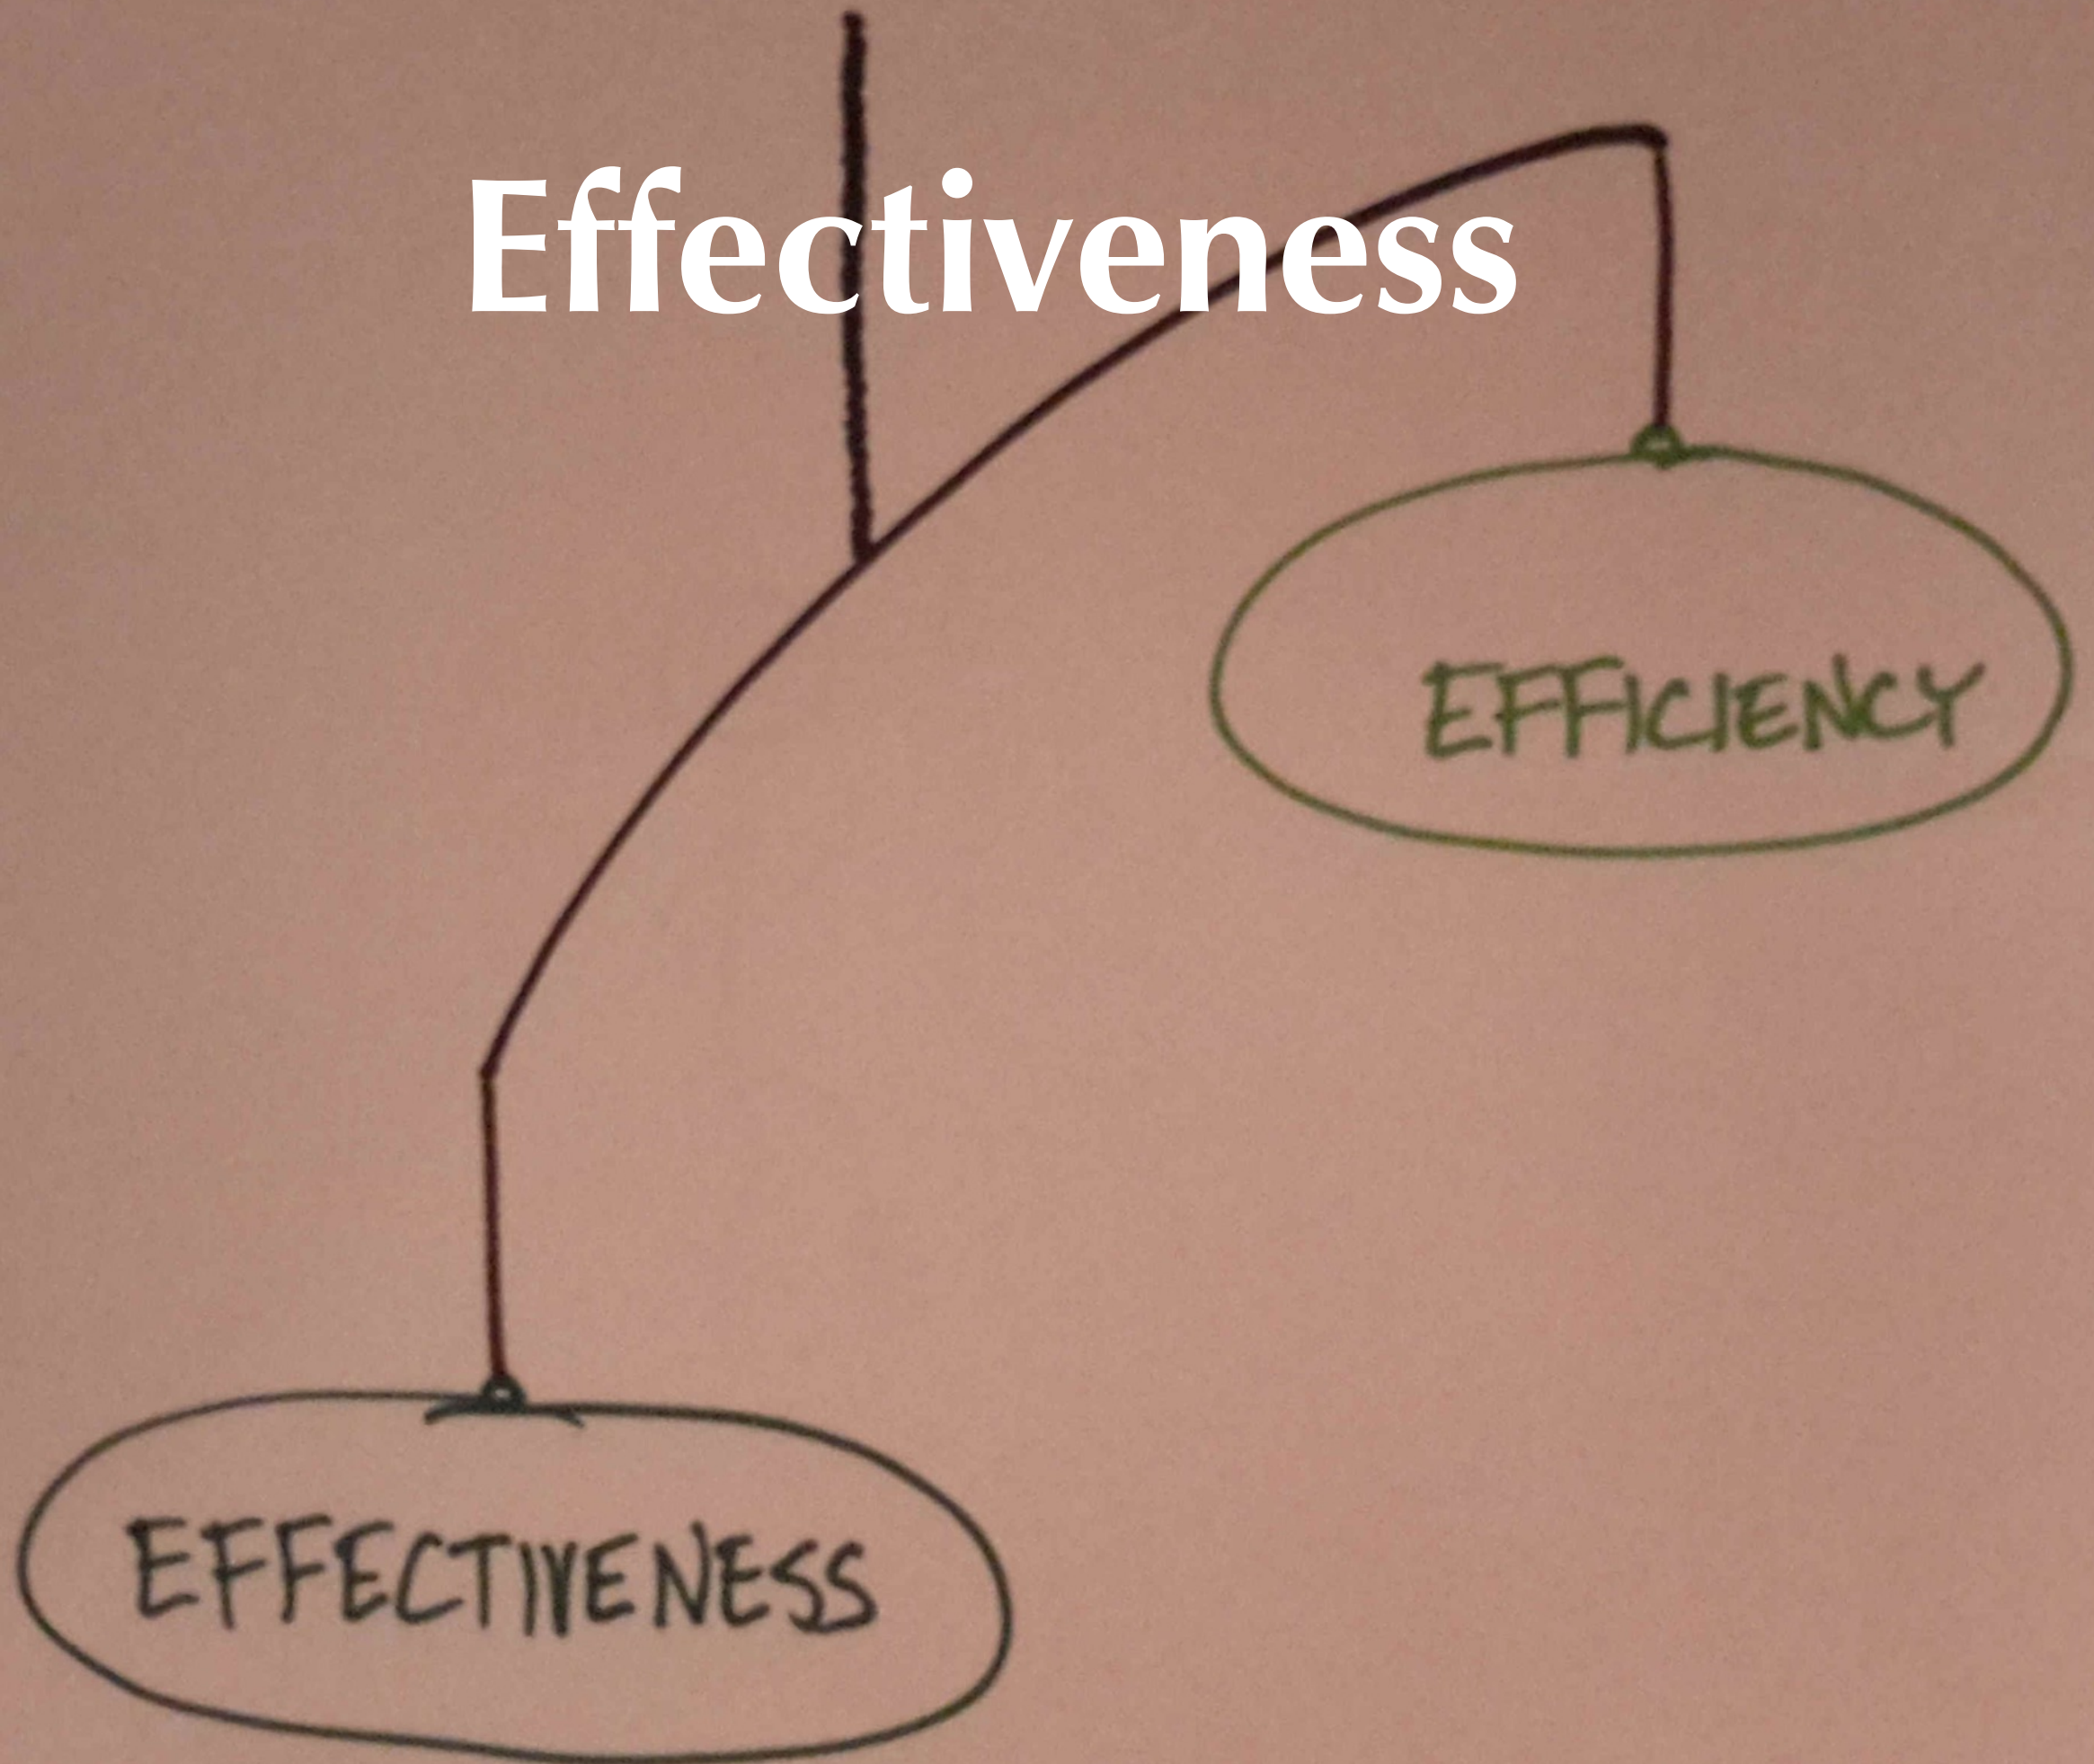

Effectiveness

Choosing the right things to do

Effectiveness

“Economics is a science which studies human behaviour as a relationship between ends and scarce means which have alternative uses.”

–Lionel Robbins, 1932

Agile, Lean, Economics

- Choose a concept from Agile & Lean.
- Identify the analogous concept from economics.
- Look at how to apply it in practice.
